

UPUTSTVO ZA UPOTREBU

(SRB)

Salmonella Differential Agar Plate (RajHans)

Preporučuje se za identifikaciju i diferencijaciju Salmonella vrsta od članova Enterobacteriaceae, posebno Proteus vrsta iz kliničkih i nekliničkih uzoraka.

Sadržaj pakovanja:

Šifra artikla (pakovanja)	Opis	Šifra primarnog pakovanja:	Broj podloga
PRM1078V20	Podloga izlivena u petri posudama od Ø90	PRM1078	20
PRM1078V60			60
PRM1078V240			240
PRM1078M40			40

Uputstva

Pod aseptičnim uslovima inokulisati ploču metodom površinskog zasejavanja. Nakon inkubacije posmatrati rast i boju kolonija.

Princip i interpretacija

Salmonella diferencijalni agar je neznačna modifikacija originalne formulacije Rambach-a (5) koji je korišten za diferencijaciju Salmonella vrsta od Proteus vrsta i ostalih enteričnih bakterija. Producija kiseline iz propilen glikola je novija karakteristika Salmonella vrsta, koja se koristi kod ove podloge. Fermentacija lakoze i produkcija vodonik sulfida su biohemiske reakcije koje se koriste u mnogim podlogama koje se preporučuju za identifikaciju i diferencijaciju Salmonella vrsta (1), kao što je SS agar, XLD agar.

Specijalni pepton i ekstrakt kvasca obezbeđuju jedinjenja ugljenika i azota aminokiselina dugačkog lanca, vitamine i druge faktore rasta koji podržavaju bujan rast bakterija. Natrijum deoksiholat inhibira Gram-pozitivne mikroorganizme, što podlogu čini selektivnom za enterične bakterije. BC indikator u prisustvu kiseline, koja nastaje iz propilen glikola, menja boju u ružičastu. Sposobnost fermentacije lakoze se određuje upotrebom indikatora, koji može detektovati prisustvo enzima β-galaktozidaze. Lakoza fermentujuće bakterije (one koje producuju β-galaktozidazu) daju plavo-ljubičasto obojene kolonije (2). Salmonellae od propilen glikola stvaraju kiselinu, i posle reakcije sa pH indikatorom daju tipične ružičasto-crvene kolonije. Ostale enterične Gram-negativne bakterije daju bezbojne kolonije. Salmonella Typhimurium i Salmonella Enteritidis daju ružičaste do crvene kolonije. Uzorak treba obogatiti odgovarajućim bujom za selektivno obogaćenje.

Kontrola kvaliteta

Podaci i rezultati kontrole kvaliteta dati su u sertifikatu analize za svaku seriju.

Skladištenje i rok upotrebe

Cuvati između 2-8°C. Upotrebiti pre isteka datuma označenog na nalepnici.

Mere predostrožnosti

Ovaj proizvod ne sadrži hazardne supstance u koncentracijama koje su iznad propisanih limita određenih važećim zakonskim regulativama i zato nije klasifikovan kao opasan. Ipak, preporučeno je slediti smernice iz bezbednosnog lista za pravilnu upotrebu. Ovaj proizvod je namenjen isključivo za upotrebu u laboratorijskim uslovima, od strane profesionalno obučene osobe.

Proizvod ne upotrebljavati ukoliko je primarno pakovanje oštećeno ili proizvod ne odgovara navedenim karakteristikama.

Odlaganje otpada

Odlaganje otpada mora biti u skladu sa nacionalnim i lokalnim regulativama koje su na snazi. Svaka laboratorija je odgovorna za rukovanje i odlaganje otpada koji nastaje u toku rada.

Upotrebljeni simboli

	Držati uspravno		Kataloški broj
	Ne izlagati direktno sunčevim zracima		Lot broj
	Konsultovati uputstvo za upotrebu		Rok upotebe
	Ne koristiti više puta		Temperatura čuvanja
	Veličina pakovanja		Proizvođač

INSTRUCTION FOR USE

(EN)

Salmonella Differential Agar Plate (RajHans)

Recommended for identification and differentiation of *Salmonella* species from members of *Enterobacteriaceae*, especially *Proteus* species from clinical and non-clinical samples.

Package contents:

Item code (packaging) REF	Description	Primary packaging code:	Number of products
PRM1078V20	Substrate poured into petri dishes of ø90	PRM1078	20
PRM1078V60			60
PRM1078V240			240
PRM1078M40			40

Directions

Surface spread the test inoculum aseptically on the plate. After incubation, observe growth and color of colonies.

Principle And Interpretation

Salmonella Differential Agar is slight modification of original formulation of Rambach (5) used for differentiation of *Salmonella* species from *Proteus* species and other enteric bacteria. Production of acid from propylene glycol is a novel characteristic of *Salmonella* species and is utilized in these media. Many of the media such as SS Agar, XLD Agar recommended for the identification and differentiation of *Salmonella* species (1) are based on lactose fermentation and hydrogen sulphide production. Peptone special and yeast extract provides carbonaceous, nitrogenous compounds, long chain amino acids, vitamins and other growth factors supports the luxuriant growth of bacteria. Sodium deoxycholate inhibits gram-positive organisms rendering the medium selective for enteric bacteria. The BC indicator turns pink in presence of acid produced from propylene glycol. Lactose fermenting ability is determined by using an indicator, which can detect the presence of enzyme β-galactosidase. Lactose fermenting (β-galactosidase producing) bacteria yield blue violet coloured colony (2). *Salmonellae* produce acid from propylene glycol and on combining with the pH indicator gives typical pink red colonies. Other enteric gram-negative bacteria give colourless colonies. *Salmonella* Typhimurium and *Salmonella* Enteritidis produce pink to red colonies. Specimen should be enriched in an appropriate selective enrichment broth.

Quality control

The data and results of quality control are given in the certificate of analysis for each lot.

Storage and shelf life

Storage between 2-8°C . Use before expiry date on the label.

Warning and precautions

This product does not contain hazardous substances in concentrations that are above the prescribed limits set by applicable legislation and are therefore not classified as hazardous. However, it is recommended to follow the guidelines provided in the safety data sheet for proper use. This product is intended for laboratory use only by a professionally trained person.

Do not use the product if the primary packaging is damaged or the product does not meet the stated characteristics.

Disposal

Waste disposal must be in accordance with national and local regulations. Each laboratory is responsible for handling and disposing of waste generated during operation.

Symbols used on labels

	This side up		Catalogue number
	Do not expose directly to sunlight		Batch code
	Consult instructions for use		Use-by date
	Do not re-use		Temperature limit
	Pack size		Manufacturer
